```
CC progression of benign prostatic hyperplasia (BPH), or screening (II) for CC or identifying an agent that modulates the onset or progression of BPH. CC The method is based on changes in gene expression in BPH tissue isolated from patients exhibiting different clinical states of prostate (CC hyperplasia as compared to normal prostate tissue. (I) comprises (CC hyperplasia as compared to normal prostate tissue. (I) comprises (CC from the subject that are differentially regulated compared to normal prostate cells (CI) comprises preparing a first gene expression profile (CI) fapH cells or BPH-like cell population, exposing the cells to the cells, and comparing the first and second gene expression profile (I) is useful for diagnosing the onset or progression of BPH. (II) is (CI) is useful for diagnosing the onset or progression of BPH. (II) is (CI) is useful for diagnosing the onset or progression dentifying (CI) is useful for diagnosing the onset or progression dentifying (CI) is useful for diagnosing the onset or progression dentifying (CI) is useful for diagnosing the onset or progression dentifying (CI) is useful for diagnosing the onset or progression dentifying (CI) is useful for diagnosing the onset or progression (CI) is useful for diagnosing the onset or progression (CI) is useful for diagnosing the onset or progression (CI) is useful for diagnosing the onset or progression (CI) is useful for diagnosing the order of gene given in the specification in the tissue or cells to the capression of gene in the database, and displaying the expression treating BPH or progression level in BPH. Agents using (II) are useful for treating BPH or prostate cancer. ABK64106-ABK64860 represent human (CI) benign prostatic hyperplasia gene sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Identifying drugs for and diagnosing benign prostatic hyperplasia, by detecting expression levels of one or more genes in prostate cells from parient that are differentially regulated compared to normal prostate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of diagnosing (I) the onset or progression of benign prostatic hyperplasia (BPH), or screening
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; Page 104; 444pp; English

The present invention describes a method (M1) for screening for an CC agent to be tested for anti-neoplastic activity, determining a change in CC agent to be tested for anti-neoplastic activity, determining a change in CC expression of at least one gene (I) of a signature gene set, where (I) CC comprises a sequence (S) selected from 8447 sequences (given in ABL61644 CC comprises a sequence (S) selected from 8447 sequences (given in ABL61644 CC expression is indicative of anti-neoplastic activity. (I) has cytostatic CC expression is indicative of anti-neoplastic activity and can be used for producing a product which CC is the data collected with respect to the anti-neoplastic agent as a CC is the data collected with respect to the anti-neoplastic agent as a CC is the data collected with respect to the anti-neoplastic agent as a CC is tructure and/or properties of the agent. M1 can be used in the CC treatment of cancer such as colon, breast, stomach, lung, thyroid, CC cosophageal, ovarian, kidney, prostate or pancreatic cancer, CC adenocarcinoma, carcinoma, clear cell cancer, infiltrating ductal cancer, CC infiltrating lobular cancer, squamous cell carcinoma, neuroendocrine CC carcinoma, papillary carcinoma and Wilm's tumour.

CC that is mapped to the mouse X chromosome. It is a member of the EP-Hand
CC protein super family and is involved in signalling pathways. It is
CC predominantly expressed in heart and skeletal muscles and is activated
CC of differentiation of cells. Csl functions in regulation aspects
CC of differentiation or adaptive processes that maintain muscle
CC prophylactic and therapeutic treatment of diseases such as those
CC prophylactic and therapeutic treatment of diseases such as those
CC prophylactic and therapeutic functional activity. It
CC is also used in the treatment of muscular and functional activity. It
CC skeletal myopathies such as Duchenne muscular dystrophy and Becker's
CC myotonic dystrophy, heart failure, cardiac hypertrophy and Becker's
CC myotiber atrophy, etc. The Csl gene sequence can also be used in gene
CC therapy, for the production of transgenic animals and for drug screening.

The patent discloses novel target genes abnormally expressed in heart Ct tissues and their corresponding proteins. The invention also relates to certain the sessing the expression level of these genes. The method ct is used for testing the predisposition of mammals and preferably humans correctly in the predisposition of mammals and preferably humans cust a heart give a heart disease or for an acute state of such a disease. It is also cuseful to treat diseases of the heart such as congestive heart failure, cordiative cardiomyopathy, hypertrophic cardiomyopathy, ischaemic cardiomyopathy, specific heart muscle disease, rhythm and conduction disorders, corresponders, pulmonary heart disease, systemic arterial hypertrension, pulmonary heart disease, valvular cheart disease, congenital heart disease, pericardial disease and conducarditis. Sequences of the invention are also used in gene therapy. A transgenic non-human mammal comprising the sequences of the invention corresponders of the development for medicaments for the treatments of the art disease. The present sequence is a cDNA from 66214 clone. This sequence used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       AAD27226
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 8,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                                                                        (sub-) transcriptome comprises messenger RNAs transcribed from multiple transcription units that populate a genome. The library comprises several oligonucleotides, each capable of hybridising selectively to a set of messenger RNAs transcribed from a given transcription unit of the genome, which encodes one or more messenger RNA splice variants. The oligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in the certification of transcripts and splice variants of human or animal transcriptomes. The libraries may also be used as specialised minical constructions to detect transcripts of a sub-transcriptome under a gerticular biological or pathological state, and so allowing the condition, to detect developmental specific genes such as those genes only expressed in specific tissue under a specific pathological condition, to detect developmental specific genes; and to detect RNA condition; to detect developmental specific genes; and to detect RNA condition; to detect developmental specific genes; and to detect RNA condition; to detect developmental specific pathological of condition; to detect developmental specific genes; and to detect RNA condition; to detect developmental specific pathological specific pathological specific pathological specific pathological specific pathological condition; to detect developmental specific pathological specific pathol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human;

                                                                                                                                                                                                                                                                      The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, theumacoid arthritis, psoriasis and inflammatory/ulcerative bowel

                     The present invention describes a method of screening for genes which modulate polyglutamine toxicity using animal models with polyglutamine sequences that cause toxicity in the animal. The model is preferably prosophila, and toxic polyglutamine sequences include the human and (TPR2) and myeloid leukaemia factor 1 (MLP) genes. The model is useful for identifying treatments for neurodegenerative and proliferative disorders, including Alzheimer's disease, Parkinson's disease, Creutzfeldt-Jacob's disease (CJD), bovine spongiform encephalopathy (BSE), Huntington's disease, Machado-Joseph disease, Spinocerebellar ataxias, dentatorubropallidoluysian atrophy, Kennedy's disease, Stroke, head trauma and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                             12-AUG-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1103
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1223
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Drosophila melanogaster expressed polynucleotide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ABL08614 standard; cDNA; 21475
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          27-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Drosophila melanogaster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                pharmaceutical;
 14133
                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL130511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                              23-MAR-2000; 2000US-191637P.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14193
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    14253
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     01-JUL-2002
                                                                                                                                                                                                                                                                      The invention relates to a recombinant entomopox virus (EPV) vector, comprising a polynucleotide encoding a protein operably linked with a heterologous promoter sequence. The invention also concerns methods for providing gene therapy for genetic deficiency disorders. Vectors of the invention are useful for delivering a polynucleotide encoding a protein to a vertebrate cell preferably a mammalian cell, such as a human cell. The vector is introduced into the vertebrate cell by infection in a viral particle, or by transfection, transduction, or injection either in vitro or in vivo. The vector is useful for the delivery and expression of invivo. The vector is useful for the delivery and expression of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Moyer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ABL56202 standard; DNA;
                                                      biologically useful proteins in gene therapy protocols, and for delivering large DNA segments for engineering of vertebrate cells. Polynucleotides of the invention have applications in techniques such as polynucleotides of the invention have applications in techniques such as polynucleotides of the invention for enging genes of interest, hybridisation production of sense or antisense nucleic acids. Vectors of the invention provide for stable integration and expression of heterologous DNA in host cells, and are adapted for accepting large heterologous polynucleotide inserts which can be delivered in an infected or transformed cell and expressed in a stable fraction. The current sequence represents a fragment of the genome of the genus B entomopoxvirus from amsacta moorei
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel recombinant entomopox virus vector useful for delivering polynucleotide encoding protein to vertebrate cell, comprises polynucleotide encoding protein operably linked with heterologous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  147

```
CC by chromesome 2 of the human malarial parasite, Plasmodium falciparum.
CC Also described are: (1) nucleotide sequences (11) encoded
CC (2) and (3) are useful for the development of vaccines against
CC (3) and (11) are useful for the development of vaccines against
CC entibody raised to immunogens comprising the sequences of (1), are
CC useful in the detection of infection with P. falciparum. Furthermore,
CC (1) (especially when they are rifine or secreted or membrane proteins)
CC (1) (especially when they are rifine or secreted or membrane proteins)
CC (1) (especially when they are rifine or secreted or membrane proteins)
CC (1) (especially when they are rifine or secreted or membrane proteins)
CC (1) (especially when they are rifine or prevent P. falciparum.
CC (1) (especially when they are rifine or secreted or membrane proteins)
CC (2) (1) (especially when they are rifine or secreted or membrane proteins)
CC (3) (1) (especially when they are rifine or secreted or membrane proteins)
CC (4) (1) (especially when they are site of drug resistance in captument.
CC (2) (1) (especially when they are site of proteins encoded by it will help to expand the complexity of the parasite biology, a process hampered by the complexity of the parasite biology, a process hampered by the complexity of the parasite resistance to drugs and mosquito complexity of the parasite resistance to drugs and mosquito complexity of the world, and there is a pressing need for vaccines and new capanets of the world, and there is a pressing need for vaccines and new capanets. AAA70078 to AAA70287 and AAB18144 to AAB18352 represent nucleotide specifically mentioned within the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RESULT 13

The present sequence represents the complete 1.66-megabase pair genome sequence of the Methanococcus jannaschii circular chromosome. The present invention describes M. jannaschii open reading frames from the genome sequence. The invention also describes a computer based system of for identifying fragments of the M. jannaschii genome that are for identifying fragments of the M. jannaschii genome that are thoulaged to target nucleotide sequences, comprising: (a) data storage means comprising the nucleotide sequence of the 164976, 58407 or 16550 beguence (see AAV21209, AAV21210 and AAV21211), or a nucleotide sequence at least 99.9% identical to it; (b) search means for comparing a comprising to the nucleotide sequence of the data storage means to the homologous sequence, and (c) retrieval means for obtaining crandom sequencing of an autotrophic archaeon M. jannaschii, the genome of which consists of 3 physically distinct elements, a large circular cardinosoma element (the 58407 by sequence given in AAV21210), and a small circular extra-chromosomal element (the 1650 by sequence given in AAV21210), and tannaschii cardinar extra-chromosomal element (the 1650 by sequence given in AAV21210), and tannaschii cardinar extra-chromosomal element (the 1650 by sequence given in AAV21210), and tannaschii cardinar extra-chromosomal element (the 1650 by sequence given in AAV21211).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ś
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             밁

The present invention provides a number of human immune system associate genes which are modified by the methylation of cytosines. The sequences can be used in the diagnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and

                                                                                                                                                                                                                                                                          Bource
                                                                                                                                                                                                                                                                                                                This clone is from a chromosome X-specific cosmid library LLOXNCC01
'U'. The source of the chromosomes was a human/hamster hybrid,
GM07297-F, from Robert Nussbadm at the University of Pennsylvania
School of Medicine. Please contact the Lawrence Livermore National
Laboratory at http://www-bio.llnl.gov/genome to obtain the clone.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
                                                                                                                                                                                                                                                                                                                                                                                                                                                    This clone was mapped by Grieff, M., Whyte, M. P., Thakker, R. and Mazzarella, R. Sequence analysis of 139 kb in Xp22.1 containing spermine synthase and the 5' region of PEX. Genomic 44:227-231 (1997).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             University, 44 SUBMITTED BY:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequencing problems, such as compressions and repeats; all regions were covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; TT:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at their source databases: Em:, EMBL; Sw:, SWISSPROT; TT:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP hitp://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX
RP11-450P7 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see

                                                                                                                                        NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 60 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

* NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 46 contigs. The true order of the pleces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       as soon as it be preserved.

US-09-484-970B-111

Sequence 111, Application US/09484970B

Patent No. 6426186 (
GENERAL INFORMATION:
APPLICANT: Volkmuth, Wayne
APPLICANT: Volkmuth, Wayne
APPLICANT: Walker, Michael G.
TITLE OF INVENTION: BONE REMODELING GENES
FILE REFERENCE: PB-0014 US
CURRENT APPLICATION NUMBER: US/09/484,970B

CURRENT FILING DATE: 2000-01-18

NUMBER OF SEQ ID NOS: 172

SOFTWARE: PERL Program

SEQ ID NO 111

LENGTH: 909

Type: DNA
